BOOK REVIEWS

Environmental Engineering

P Aarne Vesilind and J Jeffrey Peirce

The Butterworth Group
602 pp £25

The title of this new book is Environmental Engineering but it is used in a very different way from its implication in our own Society's terms. The book deals with five main aspects, Civil Engineering, Public Health, Ecology, Ethics and Environmental Engineering as a Profession.

The different aspects of the subject are dealt with exhaustively and authoritatively and the book provides excellent reference material in all these fields. It is well produced and has an excellent index.

Energy and Environmental Chemistry

Vol 1 Fossils Fuels

Vol 2 Acid Rain

L H Keith

Ann Arbor Science

Vol 1 450 pp £37.50

Vol 2 304 pp £27.50 Set £65.00

These two books are the first in a series of volumes entitled 'Energy and Environmental Chemistry'. These volumes are collected papers from distinguished authors on the North American continent and abroad, and span several national and international meetings beginning with the Second Chemical Congress of the North American continent in Las Vegas, Nevada (1980).

These symposia were jointly sponsored by the American Chemical Society's Committee on Environmental Improvement and the Division of Environmental Chemistry.

Volume 1 deals with fossil fuels and discusses how our increasing needs for energy affect our environment. The papers are all by experts in their respective fields and should be of considerable value to all concerned with this aspect of environmental engineering.

Volume 2 deals specifically with the effects and theoretical considerations of acid rain which is becoming an increasing problem in many countries.
